

WHAT WE CAN LEARN FROM THE DUTCH

REBUILDING KERALA POST 2018 FLOODS

VENU RAJAMONY AND RAKESH N.M.

Over centuries, the Dutch have been finding ways to control high waters in their country. A low-lying area with 26% of the country below sea levels, their vulnerability to floods and the experience of past disasters have prompted them to develop one of the most advanced and sophisticated flood risk and water management systems in the world. From engineering feats like the Delta Works to projects like 'Building with Nature', the lessons to be learnt from the Netherlands are many. For a Kerala recovering from the 2018 floods, these are lessons in rebuilding.
